

game data scraping

Topics:

- http
- web scraping
- data massaging
- matplotlib/numpy

Task description:

- we will scrap the steam store for data regarding popular games.
- use [this](#) link (or any similar link showing games data).
- get the video game name and its genre descriptions. (i.e. strategy, action, etc).
- calculate and show in a plot the most appeared tags.
- give the user the option to select an input for a tag, and print the % of this tag from the games list.
- plot the user input tag with any relevant statistic.
